# FV THERM

A simple and reliable system for heating distribution

## Main advantages of underfloor heating system FV THERM:

- It is comfortable. It perfectly ensures even distribution of heat in the room and in large spaces.
- It is economical. It saves 10% on heating costs. One perceives radiant heat better. Especially coming from the feet. Therefore, the actual air temperature may be lower than in the case of radiators. The required water temperature in the underfloor heating circuits does not exceed 40°C.
- Acquisition costs are the same as those of other hot-water systems.
- It is easy to regulate.
- It is universal. It can be used for all floor coverings and heating sources.
- It is suitable for new constructions and remodelled houses, flats and businesses.
- It is reliable. The minimum life is 50 years.
- It is easy to install. The high-quality execution of system pipes, plates and accessories allows the complete system to be installed in three easy steps.
- Project processing using a calculation program is a matter of course.
