Five-layer pipe

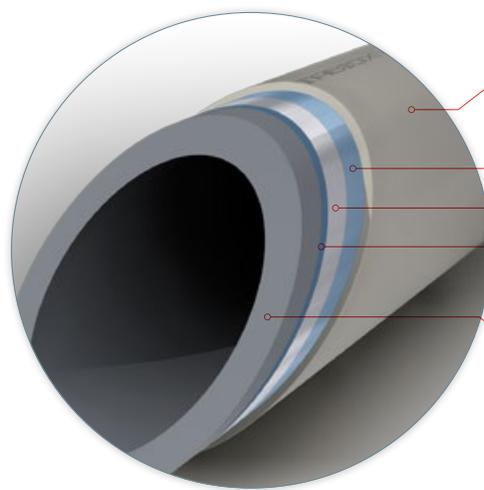

with an oxygen barrier $\varnothing 20 - \varnothing 110$ mm

Five-layer pipe with an oxygen barrier designed for high-temperature and low-temperature heating and cooling circuits

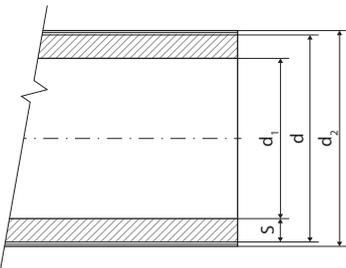

Main advantages of the new five-layer pipes

FV PP-RCT STABIOXY:

- High pressure resistance at a maximum application temperature of 90°C
- Higher flow rate - flow profile 20% larger than pipes made of PPR
- Oxygen barrier exceeding the requirement of DIN 4726
- 3x lower linear thermal expansion compared to PPR pipes
- Minimum life 50 years

- PPR (outer protective layer)
- Adhesive
- Aluminium foil (oxygen barrier)
- Adhesive
- PP-RCT (high pressure and temperature resistance)
